

# Transferring data from your local machine into the EMR instance

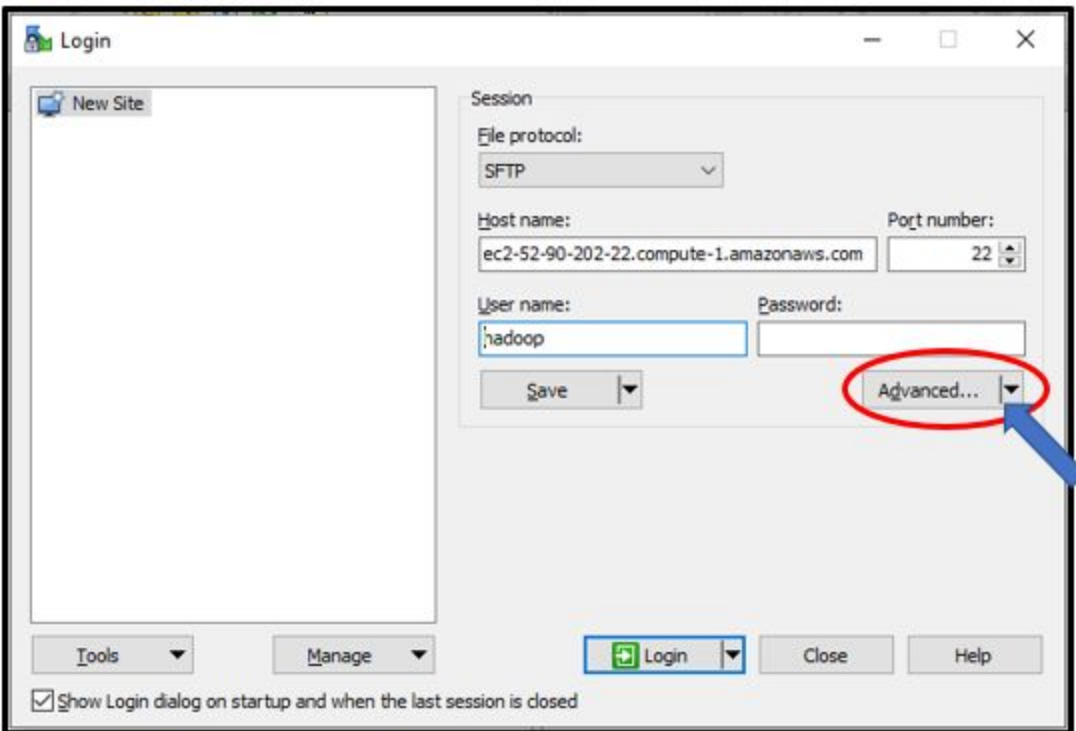

1. Install WINSCP using this [link](#)
2. Open WinSCP

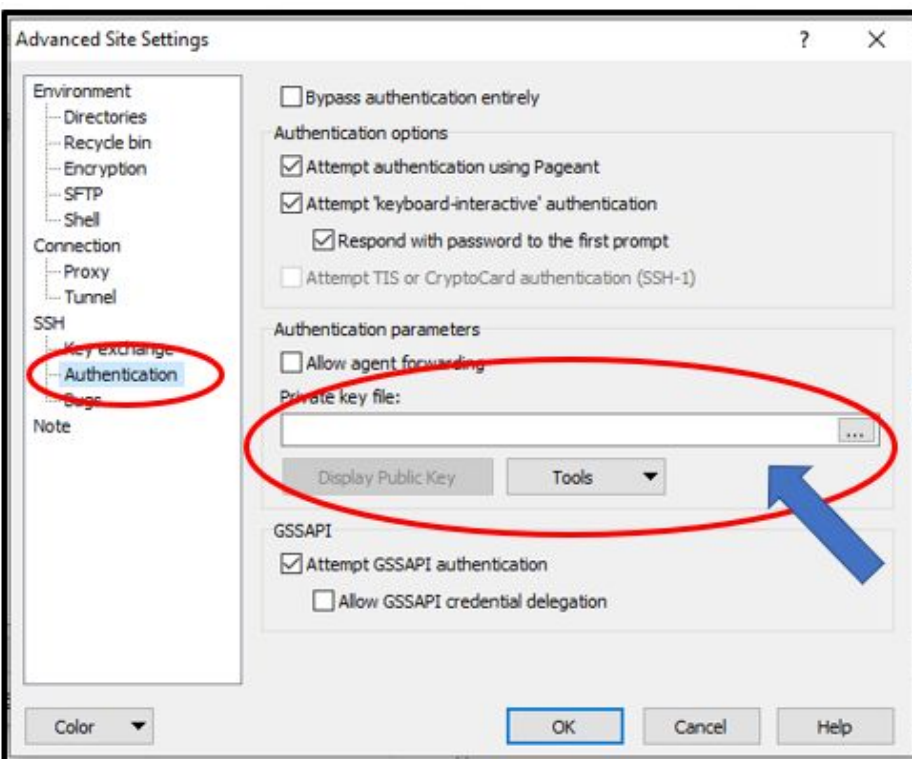

3. Copy the host name field of your EMR cluster from the console.

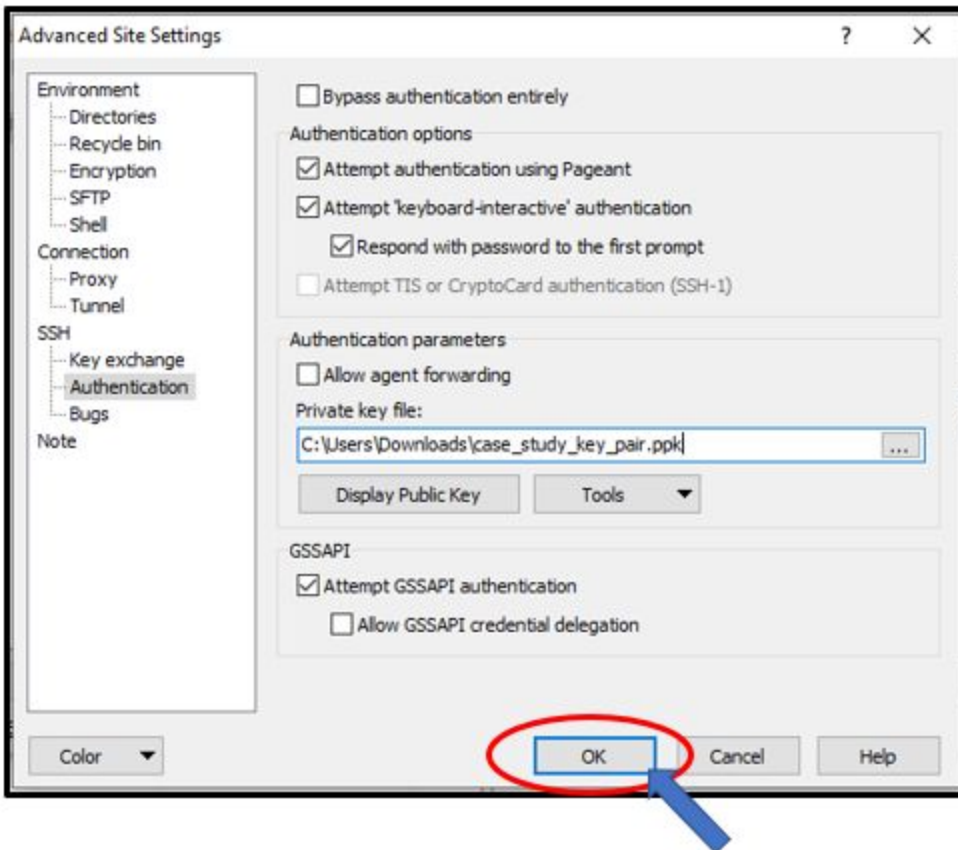

4. Fill the host name and the user name and click on **Advanced**.

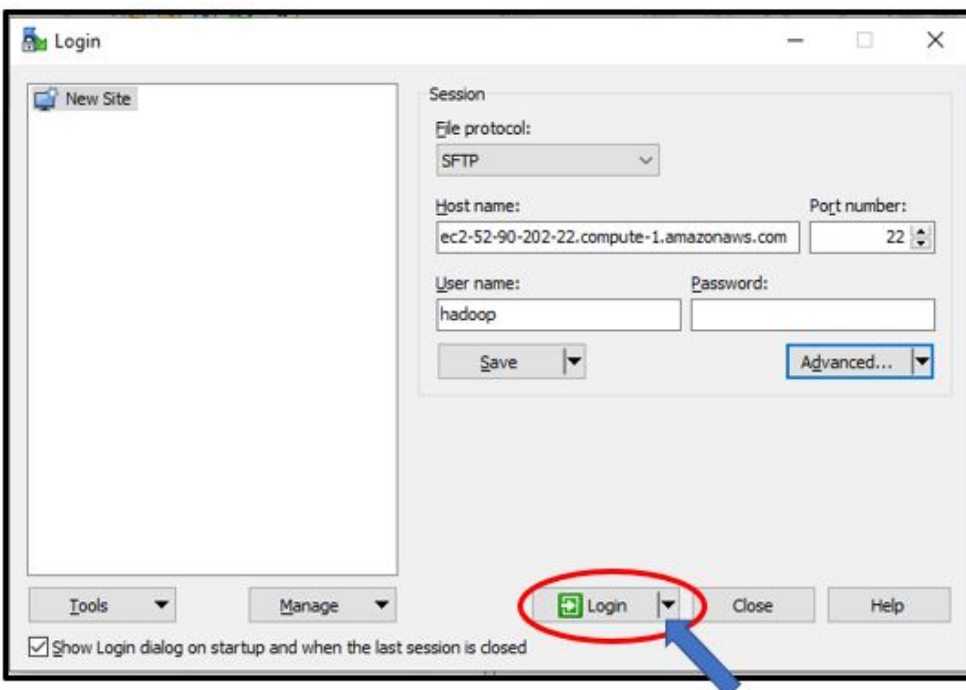

5. In the Advanced Site Settings, go to SSH>Authentication and select your Private key pair as shown below.

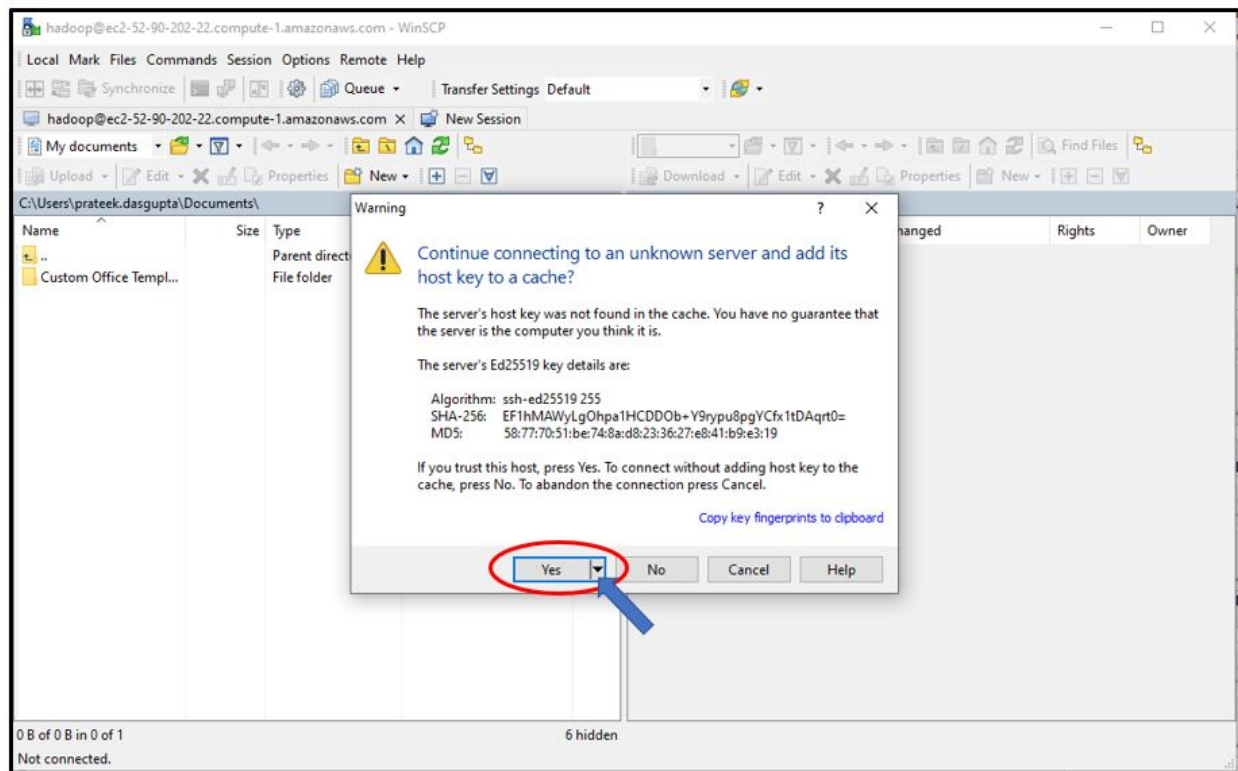

Next click on **OK**

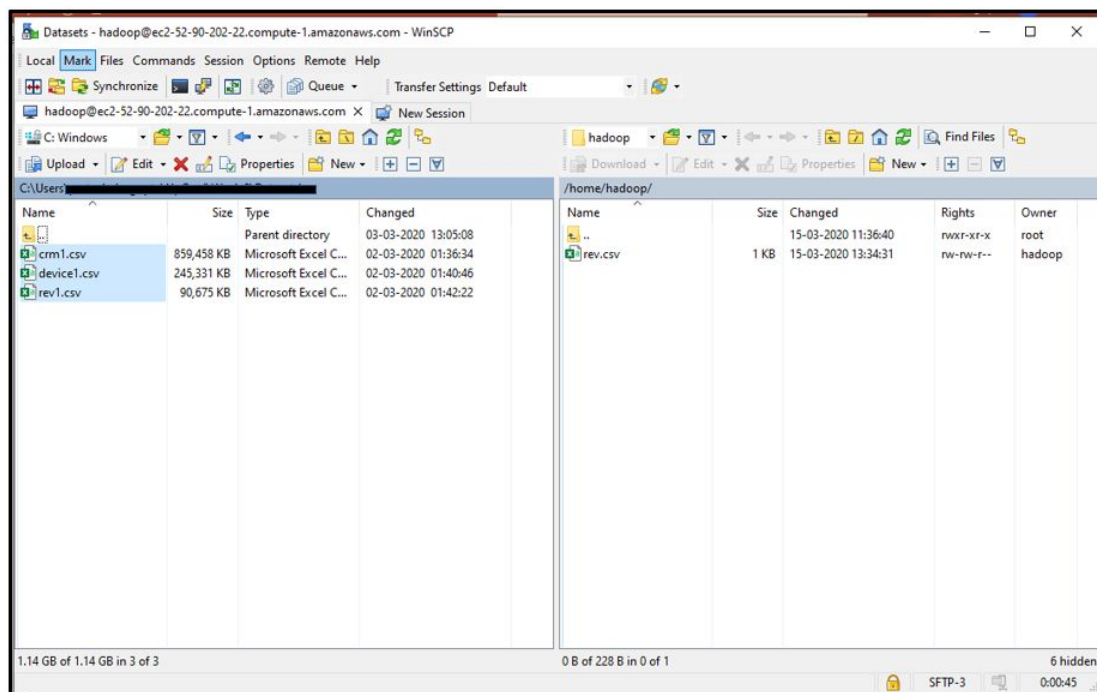

6. Now click on Login

## 7. Click on **Yes**

## 8. As you can see, the left box is linked with the directories of your local machine, and right box contains the directories of HDFS. Go to your datasets folder in your local machine and select them.

Drag the dataset files into the /home/hadoop box.
